

Commercial Renewable Energy Solutions

Shawton Energy develops and delivers commercial renewable energy solutions for organisations across the UK.

Solutions for your business

Every organisation is different.
We start by understanding your buildings, energy consumption and commercial objectives before developing the right solution.

Commercial Solar PV
Generate renewable electricity on site, either via roof or ground mounted system and reduce your reliance on the grid.

Power Purchase Agreement
Access renewable energy without significant upfront capital investment for a term between 10-25 years.

Battery Energy Storage
Store and manage energy more effectively, as well as increase energy resilence.

Multisite Solar Rollouts
A coordinated approach to delivering renewable energy across a larger property portfolio.

EV Charging
Commercial charging infrastructure designed around your site and future requirements.

Flexible ways to invest

Funded PPA
Access renewable energy without funding the system upfront.

Direct Investment
Own the asset, and retain the full benefit from day 1 of installation.

Asset Finance
Spread the investment over an agreed term, with ownership at the end of term.

Lets start the conversation.

Whether you're considering renewable energy for a single site, or a wider estate, we can help establish what's possible.
